

Amendments to the Specification

Please add the following new paragraph after the paragraph ending on line 25 of page 6:

- - As shown in FIGS. 4-9, the slider 38 includes a hook 42 extending therefrom which is resiliently pivotable along a vertical plane such that if the hook 42 is pivoted upwardly or downwardly, the resilient nature of the arm returns it to its original position. The hook 42 is configured to enter a central aperture of the disc 12. The hook 42 enters the aperture of the disc 12 from above the disc to retrieve the disc when the slider 38 is moved into the disc retrieval position over at least a portion of the disc 12. The hook 42 is forcibly removed from the disc aperture to release the disc 12 when a pulling force is applied to the disc 12 when the slider 38 is in the disc deployment position. - -
